SUMMARY

Analytics professional with 6 years in banking and fintech, turning transaction, credit and behavioral data into product, pricing and risk decisions. Has owned analytics end to end for product launches at Citi and Simpl, from KPI design and experimentation to risk models and executive reporting. Brings hands-on ML and GenAI skills that let analytics teams automate work, not just report on it.

CORE SKILLS

Analytics & Experimentation: SQL, Python, A/B testing, cohort and funnel analysis, behavioral segmentation, KPI design, statistical modeling

Risk, Credit & Pricing: Credit and merchant risk profiling, collections strategy, chargeback and refund analytics, pricing and eligibility design

Reporting & Stakeholders: Tableau, Power BI, SAS, statistical process control, executive presentations

Data & ML: PySpark, Impala, HDFS, XGBoost, NLP, RAG, LLM agents

EXPERIENCE

Information Management Officer, Digital Product Strategy | Citi India Dec 2024 – Present

Enterprise AI Adoption team: credit analytics, compliance and data quality across digital banking

- Owned end-to-end analytics for the Paze Wallet launch, building baseline metrics, behavioral segmentation and adoption-funnel tracking from scratch to drive GTM and credit strategy.
- Ran early-adoption analysis for FlexPay (Apple Pay BNPL) on credit utilization and behavioral patterns; findings shaped the strategies used to drive adoption.
- Led the SAS-to-Enterprise Analytics Platform migration, automating 20+ manual risk-reporting workflows and saving 40+ hours per month.
- Built a Data Quality & Compliance Framework (PySpark, Impala) monitoring 100+ metrics across 10+ risk reports, with a Tableau SPC dashboard that auto-flags deviations so data issues are caught before reports reach stakeholders.
- Architected a RAG-based AI governance platform with automated model review, human-in-the-loop approvals, audit logging and GitHub integration for automated code and commit review.
- Received the Citi Silver Gratitude Award for end-to-end wallet analytics on the Paze Wallet launch.

Senior Data Analyst, Product & Operations | Simpl (GetSimpl) Dec 2021 – Nov 2024

- Recovered $1.1M in delinquent accounts within 45 days through predictive risk scoring and behavior-based collections.
- Increased credit approval rates by 6% with a real-time credit limit recommendation model, balancing growth against credit risk.
- Built a hypothesis-driven eligibility model for Instant Refund and validated it through an A/B experiment: eligible users showed ~20% lower delinquency and better on-time repayment, net of merchant chargeback and fine costs.
- Led pre-launch analytics for Simpl Select, a premium bundle of priority support, Instant Refund and no-cost pay-in-3 EMI, shaping its pricing and eligibility design.
- Built a merchant risk-scoring framework (approval rate, refund rate, chargeback ratio, support tickets) to flag high-risk sub-merchants; flags went to the merchant partnerships team, who revised terms with those merchants.
- Designed a two-phase conversational AI framework that improved NLP intent classification by 15% and cut support load by 20%.
- Built end-to-end support analytics and took ownership of it, recognized with the 2023 Annual Award (“Do More With Less”).

Operations Analyst, Strategic Operations | ESSI Dec 2020 – Dec 2021

- Built pricing optimization models that improved bid win rate by 30% across 20+ network security projects.
- Applied heuristic optimization to resource allocation, cutting operating expenses by 20%.

SELECTED PROJECTS

Forward Court | Meta Global AI Developer Hackathon 2026 github.com/anurag-devx/forward-court

- Built and submitted a multi-agent fact-checker that runs inside WhatsApp on real messages, images and links: claim extraction, grounded evidence retrieval, prosecutor and defender agents, and a judge agent that returns a sourced verdict card.

MarketX | Scenario-based NSE research platform github.com/anurag-devx/marketx

- Built a scenario-based research app for NSE stocks: today’s events are matched to similar past scenarios and backed by technical and fundamental checks, with a beta agent debate; in walk-forward tests (2019–2026), top-20 picks moved 1%+ 74% of the time vs a 68% base rate, in 8 of 8 years.

offline-agent | Open-source AI agent framework github.com/anurag-devx/offline-agent

- Released a Python framework for running AI agents on local LLMs with permission controls, human approvals and verification.

Other GenAI projects | Private repositories, available on request

- **Doc2Insight:** document Q&A platform with multi-format ingestion and source-aware RAG answers (GPT-4o-mini).
- **Local-First RAG Assistant:** PDF-grounded Q&A with hybrid retrieval (FAISS + BM25), FastAPI backend and Streamlit UI.

EDUCATION & CERTIFICATION

Generative AI Engineering Professional Certificate | IBM 2026

Supervised Machine Learning | DeepLearning.AI & Stanford Online 2022

MBA, Operations & Statistics | IIIT Allahabad · Silver Medalist 2020

B.Tech, Mechanical Engineering | SPPU Pune · Distinction 2017
